25X1

Comment. After a two-month interruption the numbers of railroad cars passing through East German border crossing stations have been reported for the first time. Information of this type makes it possible to determine fluctuations in the volume of traffic directed through specific border stations in both directions and to observe the ratio between incoming and outgoing railroad cars and thus to determine whether large numbers of empty cars are being assembled outside East Germany. According to the present report, the following numbers of loaded and empty cars passed through the border stations listed in both directions.

Border Station	Westbound	Eastbound
Schnee	30	9
Kuestrin	419	429
Frankfurt/Oder	409	442
Guben	358	416
Forst	461	433
Horka	539	556
Bad Schandau	501	432
Bad Brambach	77	169
Sassnitz (ferry traffic to Trelleborg)	69	64

The increased traffic directed through Horka, Forst, Guben, and Kuestrin was connected

with increased coal imports from Poland. These increased imports have been observed since mid-September 1953 and were necessitated by the conversion of East German locomotives to hard coal firing.. [REDACTED]
